A POST YOU'VE PROBABLY SEEN

ARE AI TOOLS **COSTLIER**

The claim

“AI tools cost more than just hiring someone.”

The reality

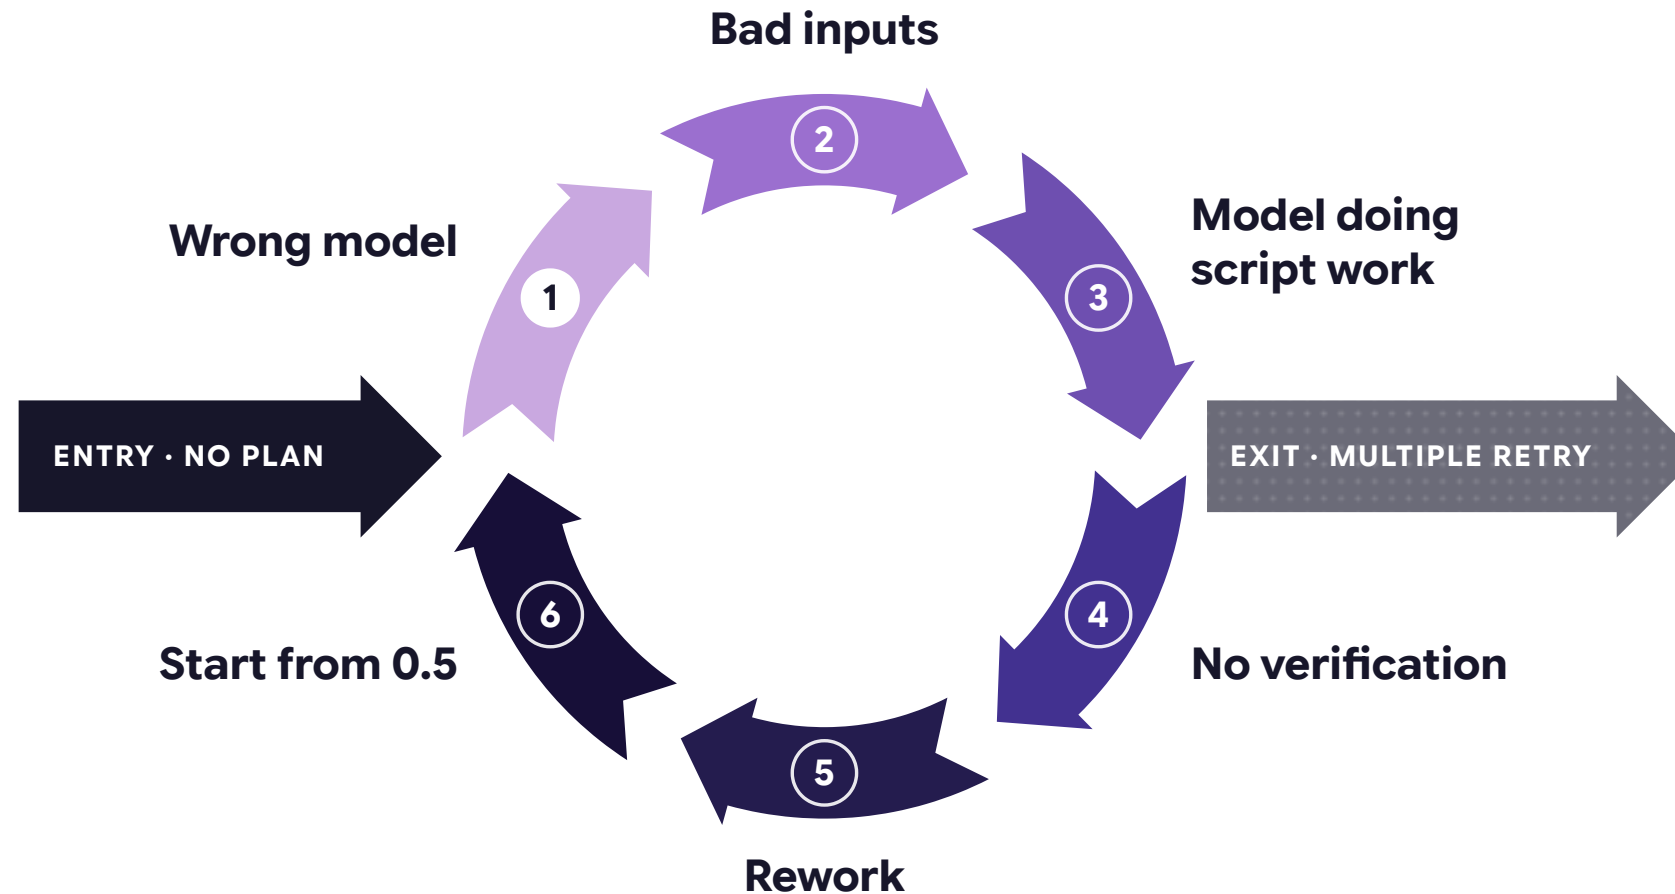

They're cheaper. Not slightly. Significantly.

The proof

Claude, Codex, Gemini: a working website in under 30 minutes. An app in a couple of hours.

THE CORE IDEA

THE COST FACTOR

SKILLS

What	<code>skills/<name>/SKILL.md</code> . Loaded on demand.
Why	Progressive disclosure. 20 skills, ~2k tokens.
Use	Instructions you keep pasting.
Trigger	Claude decides, or <code>/name</code> manually

COMMANDS

What	<code>commands / *.md</code> . A prompt you fire with <code>/name</code> .
Why	You control timing. Takes <code>\$ARGUMENTS</code>
Use	<code>/commit</code> , <code>/deploy</code> , <code>/status</code>
Trigger	You type it.

AGENTS

What	<code>agents/*.md</code> . Fresh context, restricted tools.
Why	Context isolation. Run 3-5 in parallel.
Use	Noisy work. Read-only reviewers.
Note	No <code>hooks</code> , <code>mcpServers</code> , <code>permissionMode</code>

HOOKS

What

`hooks/hooks.json`. Fires on a lifecycle event.

Why

Determinism. Instructions ~80%, a hook 100%.

Use

Block edits to `.env`. Auto-format on write.

Gotcha

Exit 2 blocks. Exit 1 does not.

SCRIPTS

What

`scripts/*.py`. Called by a skill or hook.

Why

Zero model tokens. More reliable than an LLM.

Use

Calculations, parsing, file/PDF generation.

Key

Always use `${CLAUDE_PLUGIN_ROOT}` for paths

ALL FIVE, IN ONE PLUGIN

PLUGIN ANATOMY

```
web-quote/
├── .claude-plugin/plugin.json      # manifest

    └── verify_html.py
```

LIVE DEMO

EXECUTION FLOW

01

Ask

`client-intake` skill.
Defines what to ask.

02

Check

`validate_input.py`.
Halt on bad input.

03

Research

3 agents in parallel.
Domain · theme ·
competitor.

04

Price

`quote-standards` +
`calculate_quote.py`.

05

Ship

Render · verify ·
hooks ·
`Quote_Client.pdf`.

TEAM PLUGINS · 1 OF 7

ENGINEERING

Plugin	Use case	Key components
pr-review-kit	Enforce team standards on every PR	Skill (conventions) + <code>/review</code> + reviewer agents + hook (block on fail)
commit-helper	Conventional commits, auto changelog	<code>/commit</code> (haiku) + hook (reject bad msgs) + script
onboarding	New joiner setup in one command	Skill (stack) + <code>/setup</code> + script (env check)
test-writer	Generate tests to team patterns	Skill + <code>/test</code> + coverage agent + script
debug-assist	Structured reproduce → isolate → fix	Skill + <code>/debug</code> (maps to <code>engineering:debug</code>)

PRODUCT

Plugin	Use case	Key components
spec-writer	Turn an idea into a PRD	Skill (template) + <code>/spec</code> (maps to <code>product-management:write-spec</code>)
research-synth	Interviews → ranked insights	<code>/synthesize</code> + parallel analyzer agents + script
metrics-review	Weekly scorecard from raw numbers	<code>/metrics</code> + script (calc) + skill (targets)
competitive-brief	Competitor battle cards	<code>/brief</code> + scanner agents (parallel)

PROGRAM / PM

Plugin	Use case	Key components
standup-gen	Daily update from git + tickets	<code>/standup</code> + summarizer agent + script (log parse)
sprint-planner	Scope work against capacity	Skill (capacity rules) + <code>/plan</code> + script (PTO math)
stakeholder-update	Same update, 3 audiences	<code>/update</code> + skill (tone per audience)
roadmap-update	Now / Next / Later reprioritization	<code>/roadmap</code> + skill

QA

Plugin	Use case	Key components
test-strategy	Test plan from a feature	Skill + <code>/test-plan</code> (maps to <code>engineering:testing-strategy</code>)
bug-triage	Group + prioritize incoming bugs	<code>/triage</code> + parallel classifier agents + script
regression-guard	Block merges that drop coverage	Hook (PreToolUse) + script (coverage diff)
flaky-finder	Detect flaky tests from CI history	<code>/flaky</code> + script (log analysis)

OPS / DEVOPS

Plugin	Use case	Key components
deploy-checklist	Pre-ship verification	Skill + <code>/deploy-check</code> + hook (block if CI red)
incident-response	Triage → comms → postmortem	<code>/incident</code> (maps to <code>engineering:incident-response</code>)
runbook-gen	Generate ops runbooks	Skill + <code>/runbook</code> + script
release-notes	Notes from commit range	<code>/release</code> + categorizer agent + script

SECOPS

Plugin	Use case	Key components
secret-guard	Block commits/edits touching secrets	Hook (PreToolUse, exit 2) + script
vuln-scan	Multi-agent vulnerability review	Parallel scanner agents (maps to official <code>claude-security</code>)
dep-audit	Flag risky dependencies	<code>/audit</code> + script (parse lockfile)
access-review	Periodic permission audit	<code>/access</code> + skill (policy) + script

GO-TO-MARKET

Plugin	Use case	Key components
launch-kit	Announcement across channels	Skill (brand) + <code>/launch</code> + script (format per channel)
battle-cards	Sales objection handling	Skill (positioning) + <code>/card</code>
content-repurpose	One post → many formats	<code>/repurpose</code> + parallel writer agents
competitor-watch	Track competitor moves	<code>/watch</code> + scanner agents + script

TIMELINE & STATUS · VERIFY-FIRST

PLUGIN RELEASE

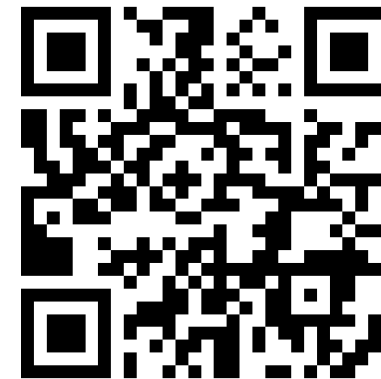

Date	Event
Oct 9, 2025	Plugins announced in public beta (<code>/plugin</code> , terminal + VS Code)
Late 2025	Plugin format bumped to v1.1.0; native installers replace <code>npm i -g</code>
May 22, 2026	Official Anthropic-managed directory <code>anthropics/claude-plugins-official</code> launched: a vetted directory of 55+ plugins maintained by Anthropic, alongside a community marketplace of 70+ more that passed automated safety screening (crossed 20,000 GitHub stars within four days)
Jun 2026	Dynamic Workflows GA (fan out to many subagents via ultracode)
Jul 2026	Claude Security multi-agent plugin ships in beta

THANK YOU
